

## lessons, seminars, meetings and conferences : lively and memorable events

### Training & Education

Visualisers can be used to display images of books, calculators or any 3-dimensional objects, for example items which normally would be passed around a class can instead be seen simultaneously by all students while the teacher describes and explains it. They can also be used in conjunction with interactive whiteboards so the visualiser can be turned into a fully interactive presentation tool, displaying and demonstrating objects, books, documents and slides.

### Videoconferencing

By using the visualiser as a document camera; any type of object from paper based documents to 3-dimensional objects can be transferred over videoconferencing.

### Meetings & conferences

Visualisers turn business presentations into lively and memorable events. They can show objects at the highest quality, through crisp and clear reproduction. 3-dimensional objects such as products or components are shown at a much higher detail than traditional slides. Presentations are not only more interesting and enlightening but also help to convey a more professional image.

### specifications

<b>CCD</b>	1/3" PS CCD 850,000 pixels
<b>Zoom</b>	12x optical zoom
<b>Resolution</b>	More than 600 TV lines (Horizontal)
<b>Plate Capture Area</b>	30cm x 23cm
<b>Image Settings</b>	Mirror
<b>Camera Movement</b>	360° Rotation
<b>Lighting Arm Adjustment</b>	Fully Adjustable
<b>Focus</b>	Auto (with back light compensation)
<b>Zoom Focusing</b>	Power Operated
<b>Positive/Negative Switching</b>	Yes
<b>Inputs Connector</b>	VGA x 2; VIDEO x 1; AUDIO x 1
<b>Outputs Connector</b>	VGA x 2; VIDEO x 1; AUDIO x 11
<b>Infrared remote</b>	Yes
<b>Computer Connector</b>	USB, RS232
<b>Digital functions</b>	Image Freeze; 8-32 Images capture and playback
<b>Dimensions</b>	450x450x160mm (closed); 450x445-630x605mm (open)
<b>Weight</b>	5.8 kg
<b>Warranty</b>	1 Year; (3 Years on Registration)

### document camera

Visualisers unlike OHPs do not need specially prepared slides; they can show documents, books and any other item you wish to show.

### presentation tool

They can be used as overhead projectors and slide projectors but offering much better image quality. Apart from document material, and slides they can also show 3-dimensional objects in close-up detail.

### scanner

Visualisers can be used to transfer images to a computer which can then be saved in JPEG, TIF or BMP formats. This allows the visualizer to be used as a scanner for 3-dimensional objects as well as documents.

### network device

Visualisers can be used to transfer visual information across networks via LANs. This can be done enterprise-wide or via the internet.
